Toxins Surround Us

In normal metabolism, our bodies produce waste by-products. These are often toxic substances that we must eliminate from our bodies, including ammonia, carbon dioxide, reactive oxygen species (ROS), and other free radicals. In addition, our bodies encounter substances every day from air, food, water, medications, pesticides, heavy metals, fumes, synthetic materials, cigarette smoke, caffeine, and much more. To maintain health, your skin, liver, digestive system, lymphatic system, kidneys, lungs, and blood all work together to eliminate this barrage of harmful substances from your body. When these systems become stressed, normal detoxification mechanisms are stressed as well. The following nutritional supplements are formulated from whole food and herbal ingredients to contain the optimal nutrients and phytochemicals that support the body's detoxification systems and facilitate natural "clean-up" efforts.

SP Cleanse® Nutrients in juniper berries and collinsonia encourage healthy kidney function, while those from red clover, burdock, and Oregon grape root support blood and lymphatic system function. Fenugreek seed powder supports healthy gastrointestinal function, particularly the elimination of wastes. Barley grass is not only nutritious but contains digestive enzymes that help break down toxic substances in food. Phytonutrients in milk thistle and apple pectin support a healthy liver and liver detoxification functions.♦*

Gastro-Fiber® Dietary fiber comes from the cell walls of plants and can have specific effects on different portions of gastrointestinal function. Gastro-Fiber contains nutrients to help cleanse and lubricate the intestinal tract, encourage regular elimination, support and maintain the intestinal lining, and enhance the growth of beneficial intestinal bacteria.♦*

Livaplex® Livaplex is a primary liver support product that enhances the ability of the liver to produce enzymes that convert potentially harmful substances into less toxic ones. Healthy liver function increases detoxifying efficiency.*

Cholacol® II Cholacol II contains bentonite, which has adsorbent properties. An adsorbent functions like a magnet, where materials adhere to its surface and are carried away for elimination. In this way, the bentonite in Cholacol II helps cleanse the intestinal tract.*

♦ SP Cleanse and Gastro-Fiber are part of a purification program that include two other Standard Process products: SP Complete™ and SP Green Food™.

MEDIHERB®
INNOVATIVE HERBAL SOLUTIONS

Spanish Black Radish Spanish black radish, a member of the Brassica family, promotes the healthy cleansing of the gastrointestinal tract. Spanish Black Radish contains sulfur and helps protect the body against free radicals, the highly unstable molecules that can damage cells and genetic material.*

Parotid PMG® The parotid gland is one of the largest pairs of salivary glands located on each side of the face. The parotid glands secrete saliva to initiate the digestive process. Saliva contains organic substances including enzymes, proteins, and amino acids. Saliva helps cleanse the upper digestive tract by providing several materials that support healthy intestinal flora. Bovine parotid PMG™ extract helps maintain the parotid glands in a good state of repair to support healthy parotid gland function.*

The following MediHerb products also aid in the purification process.

LivCo® LivCo contains Schisandra fruit, Rosemary leaf, and Milk Thistle seed. This combination of herbs contains nutrients and other substances that help the liver metabolize circulating natural toxins and eventually eliminate them from the body. This unique combination also provides antioxidant protection to help maintain cellular health.*

Burdock Complex The herbs in Burdock Complex (Burdock, Slippery Elm, Sheep Sorrel, and Rhubarb) are combined to help support the body's organs through elimination, maintain healthy blood and skin, and support healthy mucous membranes in the digestive system.*

DermaCo The herbs contained in DermaCo (Sarsaparilla, Cleavers, Oregon Grape, Burdock, and Yellow Dock) contain phytochemicals that encourage healthy elimination in the organs—particularly the bowel, kidney, and skin. The unique combination of these specific herbs also supports lymphatic system function, assists in maintaining healthy blood, and promotes healthy skin.*
