Ragweed and the Fall Season

www.standardprocess.com

Ragweed, which is native to almost all of the United States, disperses millions of pollen grains from August through November, or until a hard frost. Some pollen granules can be carried hundreds of miles. For many of us, the body becomes sensitive to pollen, a normally tolerated and generally considered harmless substance during this time of year.

Many people try to limit their exposure to pollen by closing windows, using air-conditioning, and showering after outdoor activities to remove pollen from the skin and hair. This fall, rely on Standard Process' line of seasonal defense products and help your body defend itself against pollen naturally.

Allerplex Allerplex is a special-combination product formulated to support the body's immune system response to seasonal, environmental, and dietary stresses. Allerplex contains vitamin A and C complexes, which have been shown to be important supporters of the immune system. It has also been formulated to maintain healthy liver function—the body's natural cleansing system.*

Antronex Antronex contains Yakriton, a bovine liver fat extract discovered in the 1920s by Japanese researchers. Yakriton has been shown to help maintain a healthy liver via its blood-filtering properties and affect on histamine. Histamine is released when tissues become damaged, inflamed, or subjected to an allergic reaction. Histamine is involved in a myriad of physiological conditions.*

Ragweed Pollen

Fen-Gre Fen-Gre supports healthy lung and lymph function. It contains fenugreek seed, which is a mucus solvent having the ability to soften and dissolve hardened masses of accumulated mucus. The change in consistency allows Fen-Gre to help the body expel mucus and phlegm from the bronchial tubes more easily.*

Cal-Amo This is a calcium product and an acidifying compound, providing the chlorides that are useful in the support of proper acid/alkaline balance. Maintaining a healthy pH balance at the cellular level helps support and maintain respiratory and connective tissues and skeletal structures and supports the immune system. In addition, calcium is a major nutrient building block for the body.*

Drenamin Drenamin contains bovine adrenal and bovine adrenal PMG™ extract. The adrenal cortex from the glandular organs produces a glucocorticoid known as cortisol. Cortisol helps feed and maintain the body's inflammation response mechanisms.*
