Spring is in the Air

Spring is here, and it is time to start spring-cleaning. Just as the dust begins to fly inside, pollen starts to fly outside. Seasonal stresses, such as pollen sensitivity, are one of the most common health problems in the United States. Pollen, tiny spores of flowering plants, is very prevalent in the spring-time. Grass and tree pollen are the largest culprits of spring stresses. Budding trees and flourishing grasses give off pollen, which is then circulated throughout the spring air. This time of year is very miserable for some people. The beauty of spring can burden those who are sensitive to seasonal stresses. Itchy, watery eyes, headaches, sneezing, and coughing are problems that spring pollen may cause.

To help cope with tree and grass pollen, many people choose to limit their exposure by closing their windows, using air-conditioning, avoiding hanging clothes outside to dry, and showering after outdoor activities to remove pollen from the skin and hair. This spring, clean up your seasonal stresses.

Standard Process offers many products that will help your body naturally defend itself from seasonal stresses.

*Allerplex[®] is a special combination product formulated to support the body's immune system response to seasonal, environmental, and dietary stresses. Allerplex contains vitamin A and C complexes, which have been shown to be important supporters of the immune system. It has also been formulated to maintain healthy liver function—the body's natural cleansing system.**

*Antronex[®] contains Yakriton, a bovine liver fat extract discovered in the 1920s by Japanese researchers. Yakriton has been shown to help maintain a healthy liver via its blood-filtering properties and affect on histamine. Histamine is released when tissues become damaged, inflamed, or subjected to an allergic reaction. Histamine is involved in a myriad of physiological conditions.**

*Fen-Gre[®] supports healthy lung and lymph function. It contains fenugreek seed, which is a mucus solvent having the ability to soften and dissolve hardened masses of accumulated mucus. The change in consistency allows Fen-Gre to help the body expel mucus and phlegm from the bronchial tubes more easily.**

*Cal-Amo[®] is a calcium product and an acidifying compound, providing the chlorides that are useful in the support of proper acid/alkaline balance. Maintaining a healthy pH balance at the cellular level helps support and maintain respiratory and connective tissues and skeletal structures and supports the immune system. In addition, calcium is a major nutrient building block for the body.**

*Drenamin[®] contains bovine adrenal and bovine adrenal PMG™ extract. The adrenal cortex from the glandular organs produces a glucocorticoid known as cortisol. Cortisol helps feed and maintain the body's inflammation response mechanisms.**
